Data Transmittal

TO: Joe Grames **DATE:** 30 Jul 2008

FROM: Chris Curtis **Checked:** **# :** L1176

DETAILS:

Below are the results of the location surveys of the load lock gun fiducials from Aug. 8, 2007 and from 24 July, 2008. Coordinates are in meters with Z=80000, X=60000 and Y=2100 defining the center of the accelerator. Deltas are in millimeters in a right handed system with +Z being downstream, +X to the beam right, and +Y being above ideal beam elevation. The location of tooling balls A-F is given, as well as the location of the derived center (based on upstream and downstream flanges). Yaw, pitch an roll is also given in degrees, where positive yaw is counter clockwise from above; positive pitch is counter clockwise from beam right; and positive roll is clockwise looking downstream.

For the recent survey the location of the laser line irises is also shown, together with the DY in millimeters.
