DETAILS:

Data: Inspection\HallD\BarrelColorimeter\080715a

Below are the results from the sag survey performed on the Hall D lead barrel collimator. A right-handed coordinate system (in millimeters) was established off the Aluminum strong back. The top narrow edge of the Al controlled the pitch and the side controlled the roll and yaw. Therefore, the sag (Y values) would be perpendicular to the side of the Al. Where, accessible, measurements on the top of the Al surface opposite the Pb points were also measured.

LOC.	Z	X	Y	LOC.	Z	X	Y
