Summary

Questions

Current deficits

- No good charge particle tracking
- No time information from single CsI crystal
- Main calorimeter not in first level trigger

Physics

Experiment

Accelerator

Target

Tagger

Calorimeter

Future

Upgrades

Time Projection Chamber

New APD

Readout

Flash ADCs

Summary

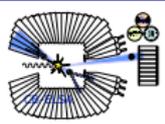

Questions

Current deficits

- No good charge particle tracking
- No time information from single CsI crystal
- Main calorimeter not in first level trigger

Intended changes

- New time projection chamber (TPC) in combination with new superconducting solenoid and existing iron return yoke
- New single crystal readout, new first level trigger

Upgrade: Time Projection Chamber

Physics

Experiment

Accelerator

Target

Tagger

Calorimeter

Future

Upgrades

Time Projection Chamber

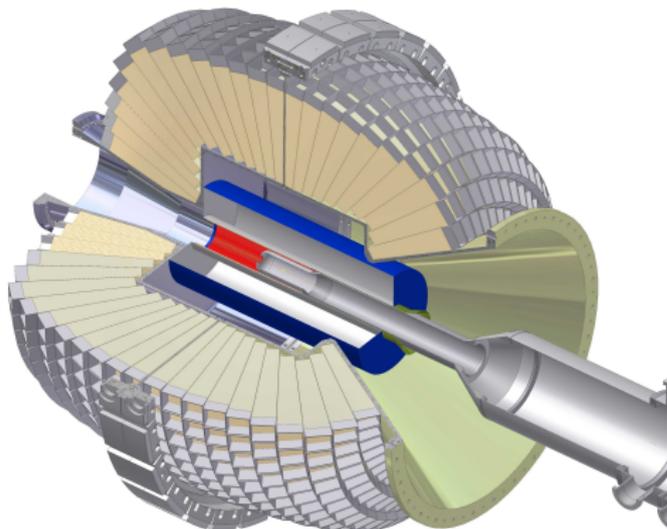

New APD

Readout

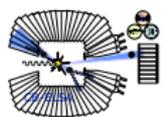

Flash ADCs

Summary

Questions

- Planned upgrades
 - Insert TPC into calorimeter
 - Add superconducting magnet to setup
- Track and momentum reconstruction on charged particles

Upgrade: New APD Light Readout

Physics

Experiment

Accelerator

Target

Tagger

Calorimeter

Future

Upgrades

Time Projection

Chamber

New APD

Readout

Flash ADCs

Summary

Questions

- ① Speed up crystal light readout to gain trigger opportunity on Barrel
- ② Replacing current QDCs by Flash-ADCs to increase both readout rates and energy resolution

Currently testing new Light Readout with two Large Area Avalanche Photo Diodes
my thesis

- Energy
- Time

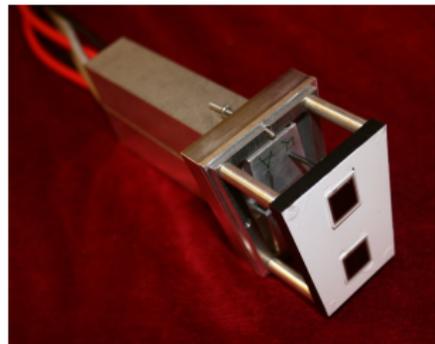

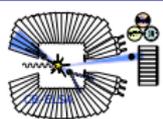

Figure: Crystal end cap with new APD readout

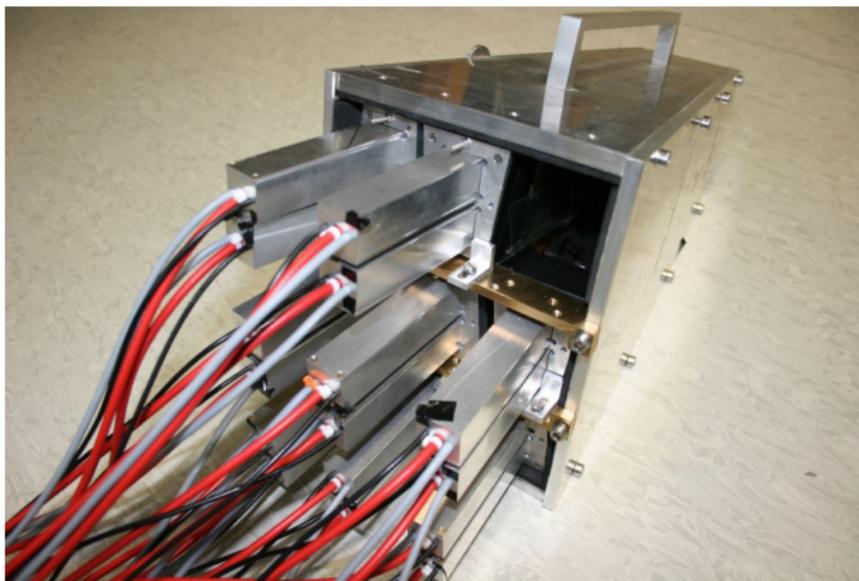

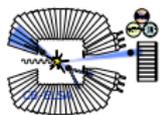

Figure: Array of CsI(Tl) crystals with new APD readout for testing purposes

First Performance Results: Energy Resolution

Readout
Flash ADCs

Summary

Questions

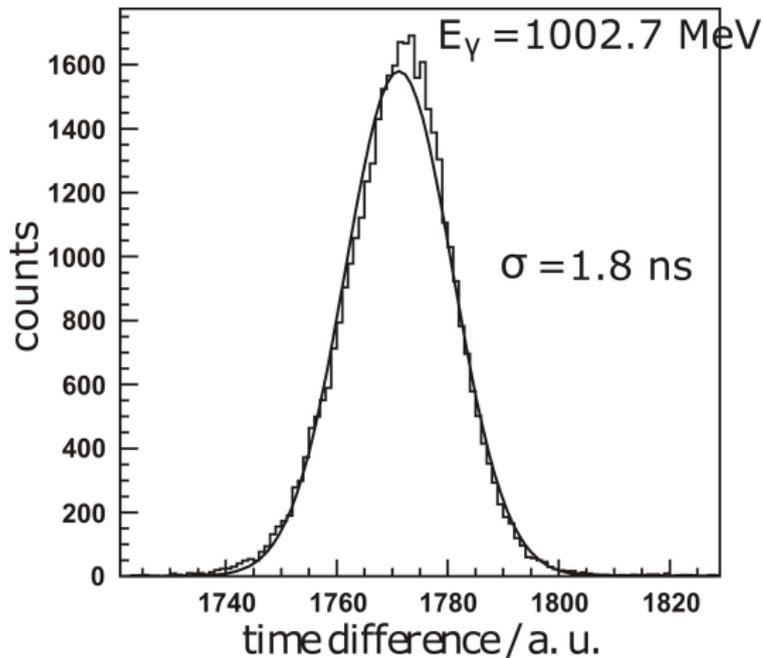

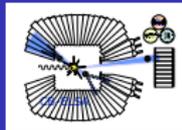

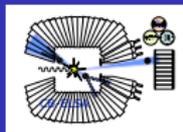

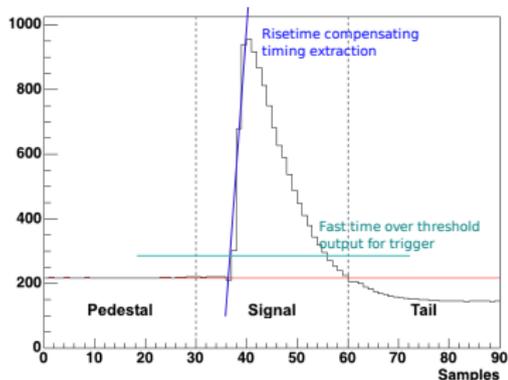

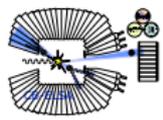

Figure: Time resolution measurement with tagged photon beam

- Extraction of
 - Energy
 - Pedestal
 - Tail
 - Further information
- Extraction of Time
 - via Constant fraction
 - or via optimized risetime compensating scheme
- Generation of a fast signal for trigger

- Exciting hadron spectroscopy is happening at Bonn
- Capabilities for double polarization experiments
- Several improvements planned
 - Charged particle identification planned: TPC, magnetic field
 - More efficient readout: more efficient trigger, better energy/time resolution

Time Projection Chamber

New APD

Readout

Flash ADCs

Summary

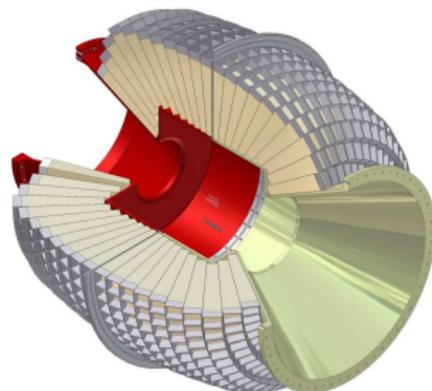

Questions

Inner detector

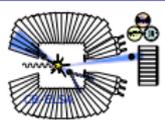

- 513 scintillating fibres in 3 layers
- Charged particle identification

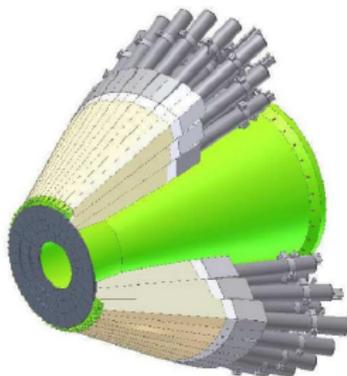

A high precision calorimeter

- 1280 CsI(Tl) crystals
- Read out by photo diodes
- θ coverage 30° to 156°

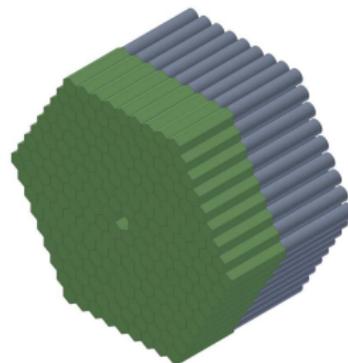

Forward plug

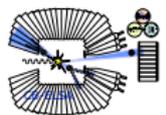

- 90 CsI(Tl) crystals
- 180 front side plastic scintillators
- $12^\circ - 30^\circ$ coverage in θ

Mini TAPS

- 216 BaF₂ crystals
- $2^\circ - 12^\circ$ in θ
